Explanation Codes:

A. 80 District. The increase in poverty increased overall funding. The increase in the poverty weight was greater than the loss of any other weight and also greater than the loss of funding per weight because of additional weights in the system.

B. 11 Districts. Poverty and extended ADMw increased. However, the increase did not offset the relative loss of funding per weight.

C. 24 Districts. Poverty increased, but only indirectly increased extended ADMw. This means that another variable, most likely a decline in student enrollment, prevented the poverty increase from being fully realized. The end result is that even with the increase in extended ADMw, the amount is not enough to overcome the relative loss of funding per weight.

D. 45 Districts. Poverty increased, but extended ADMw did not. Districts are still using extended ADMw and seeing only the relative loss of funding per weight.

E.17 Districts. Poverty weights decreased in these districts, but the districts use the previous year ADMw. The districts are only seeing the relative loss of funding per weight.

F.16 Districts. Districts were increasing enrollment. Poverty weights decreased current year ADMw and thus decreased extended ADMw. These districts are seeing a relative loss in funding due to decreased weights and decreased funding per weight.

G. 1 District. Poverty decreased, but another factor increased extended ADMw. The increase was not greater than the loss of funding per weight.

H. 3 Districts. Poverty increased but another factor reduced extended ADMw resulting in a relative loss in funding.
