

Curricular and Extracurricular Student Attendance Project

What it is

At the Data Collection Committee meeting in February 2018, it was noted that school and district presence/absence reporting varies throughout the state on student time spent travelling to/from sports and extracurricular activities. For this reason, we're doing a project to attempt to determine:

1. Whether students missing in-class time for curricular and extracurricular activities is affecting chronic absenteeism rates.
2. If students that miss time for curricular and extracurricular activities have different outcomes (dropout/graduation) from students that do not miss time for curricular and extracurricular activities.
3. If the type of absences (curricular/extracurricular/band/choir) matter in the outcome of students.

How to volunteer

Please volunteer for this project by the end of August 2018 through the web form found here:
