

# CISA WEBINAR

## INTRODUCTION TO THE JOINT CYBER DEFENSE COLLABORATIVE FOR SLTT PARTNERS

### Live Webinar Thursday, October 28

The Cybersecurity and Infrastructure Security Agency (CISA) promotes national resilience by coordinating actions across federal agencies; state, local, tribal and territorial partners (SLTT); and private sector entities to identify, protect against, detect, and respond to malicious cyber activity targeting U.S. critical infrastructure.

To accomplish this, the Joint Cyber Defense Collaborative (JCDC) leads development of the Nation's cyber defense plans by working across the public and private sectors to help defend against cyber threats to U.S. critical infrastructure.

Join this webinar to learn more about how CISA is unifying cyber defense planning and operations for its SLTT partners through the JCDC. CISA encourages cross-functional, whole of entity participation for each SLTT organization participating in JCDC.

Depending on your organization's approach, this may include representation from the following disciplines or departments: information technology/information security, emergency management, law enforcement, National Guard, elections, public utilities, and other public critical infrastructure organizations.

For further information on how the JCDC is leading the development of cyber defense plans to help protect the Nation against cyber threats, visit CISA's JCDC webpage at [cisa.gov/jcdc](https://cisa.gov/jcdc).

### EVENT DETAILS

**DATE** 10/28/2021

**TIME** 11:00am to 12:00pm

**LOCATION** Adobe Connect
