

# Introduction to the **FORENSIC EXPERIENTIAL TRAUMA INTERVIEW** within the Sexual Assault Investigation Response

Featuring Expert Instruction By

**Supervisory Special Agent with the US Army  
Criminal Investigation Command**

**Lori Heitman**

and

**Dr. Christopher Wilson**

The Forensic Experiential Trauma Interview® enables effective evidence gathering, reduces the inaccuracy of the information provided by a victim during an interview and greatly enhances the understanding of the traumatized person's experience. Key to this interview technique is the neurobiology of trauma, which enables investigators to understand how victims, due to automatic reactions by their brains, actually experienced their assaults and recorded them into memory.

Training includes instruction on:

- Collecting Experiential Information
- The Forensic Experiential Trauma Interview Technique
- Best Practices when Working with Trauma Victims
- How to Document an Experiential Interview
- Interview considerations for Male Victimization
- Interview considerations for Ethanol Facilitated Sexual Assault
- Key Brain Circuitries that Determine Responses during Sexual Assault
- Normal and Brain-Based but Commonly Misunderstood Sexual Assault Experiences and Behaviors
- Tonic Immobility, Collapsed Immobility, and Dissociation
- The Neurobiology of Traumatic Memory
- Key Principles of Memory Encoding, Storage and Retrieval

**CLICK HERE TO REGISTER** or visit the law enforcement portal at [www.ReportingOptions.org](http://www.ReportingOptions.org) for more information. Registration fee of \$395.00 includes two days of training and all materials.
