Pollution in People

The OPHA Health Promotion & Education and Healthy Environments Sections are hosting this Oregon Environmental Council Presentation. In the Oregon Pollution in People study, a diverse group of ten women and men volunteered to have their bodies tested in a study of chemical pollution in Oregonians. Every person tested had at least 9 and as many as 16 toxic chemicals in his or her body including PFCs, phthalates, mercury, pesticides, bisphenol A, and PCBs. This presentation will discuss the chemicals tested for, health impacts linked to these toxins, and simple steps individuals can take to reduce exposure to these compounds.

Date/Time: March 19, 2-4pm

Location: Portland State Office Building, Room 1A
800 NE Oregon St
Portland, OR 97217

Presenter: Renee Hackenmiller-Paradis, PhD, MPH
Environmental Health Program Director
Oregon Environmental Council

This event is open to everyone
