Data base: Joan Biediger joan.biediger@slc.usda.gov 801-844-2951

NAIP Ground Control Point Coordination

Ground control points are gathered by APFO for use in inspecting the horizontal accuracy of the NAIP imagery. The control points have been provided by federal, state, county, city, tribal and other agencies and organizations. These points are generally from existing data rather than acquired specifically for NAIP. The data is reviewed and placed into an Oracle database for use in the APFO quality assurance process. The points have three main requirements:

1. Photo-identifiable on 1-meter GSD imagery
2. Horizontal accuracy of 1-meter or better, preferable 30-cm or better
3. Supplemental Data such as descriptions, maps, sketches, photos, etc. to enable positive identification of the point
