

Marion County Data Profile from Year Four

LaShanda N. Eller, MPH
Summer 2015

About this Data Profile

The data included in this Profile comes from the Entry and Exit Surveys administered to *iCuidate!* participants in Marion County from July 1st, 2014 to June 31st, 2015. Participants take the Entry Survey before they begin the *iCuidate!* curriculum and the Exit Survey is taken immediately after the last module of *iCuidate!* is finished. The surveys are both anonymous and confidential; therefore, data is reported in the aggregate for the above specified time periods only. Comparative results between Entry and Exit Surveys do not infer causation, as cohorts are not exclusive between the Entry and Exit Surveys.

Participants on the Entry Survey were present at Module 1 and participants on the Exit Survey were participants who returned the required parental consent form, which was required for participants who were 17 years and younger and who attended the last module.

The participant counts per survey are as follows:

Entry Survey (n=421 participants)

Exit Survey (n=314 participants)

The average age of *iCuidate!* participants (at Entry Survey) in Marion County in Year 4 was ***14.71 years***.

Figure 1 shows the age breakdown of participants at program entry. Thirty-five percent of participants reported being “14 years” on the Entry Survey, followed by about a quarter of participants who reported they were “15 years.” About five percent of participants reported they were “17 years.”

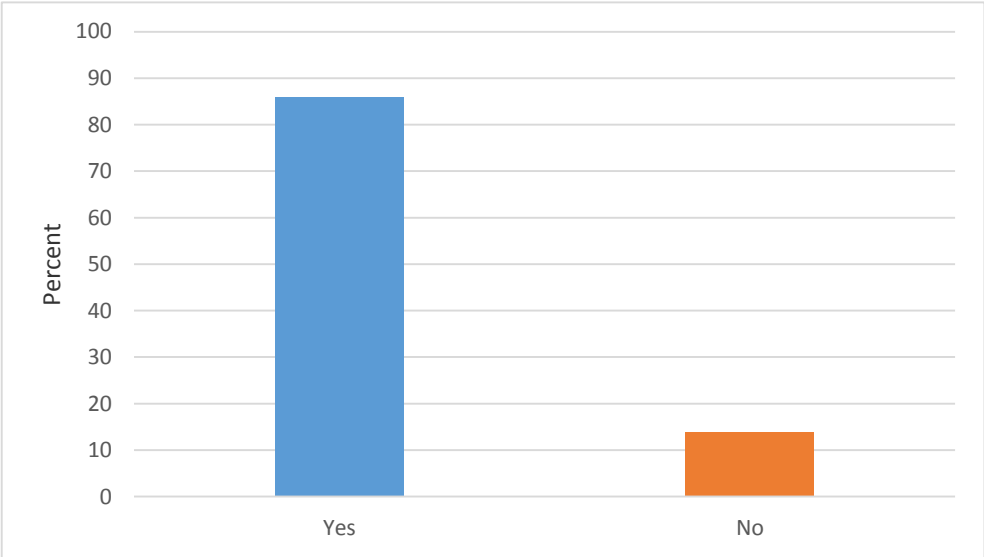

Figure 1. How old are you? (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers; Scale to 50%

Eighty-five percent of participants reported they were of Hispanic or Latino origin on the Entry Survey, as seen in Figure 2.

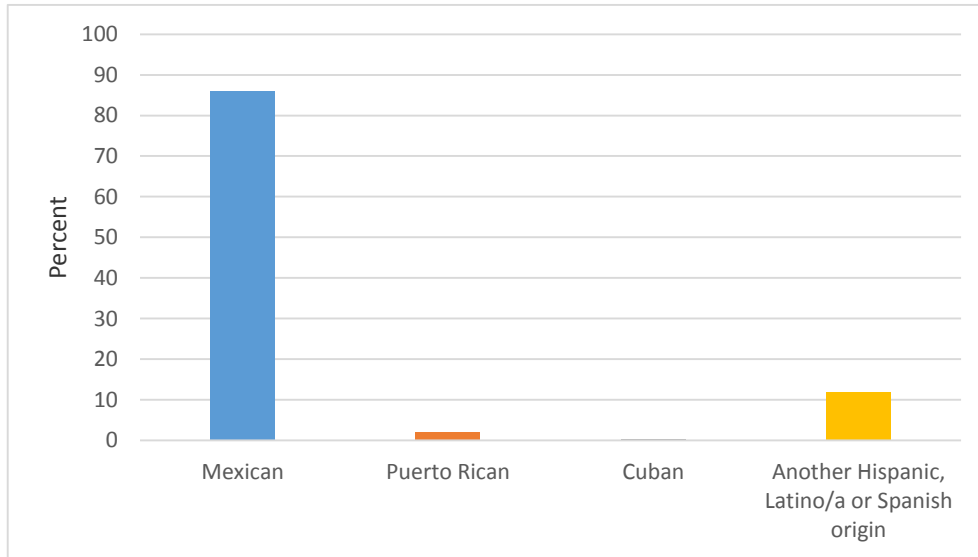

Figure 2. Hispanic or Latino Origin (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers

Among participants who reported they were of Hispanic or Latino origin, 85% reported they were “Mexican” followed by 10% of participants who reported they were “another Hispanic, Latino/a or Spanish origin.”

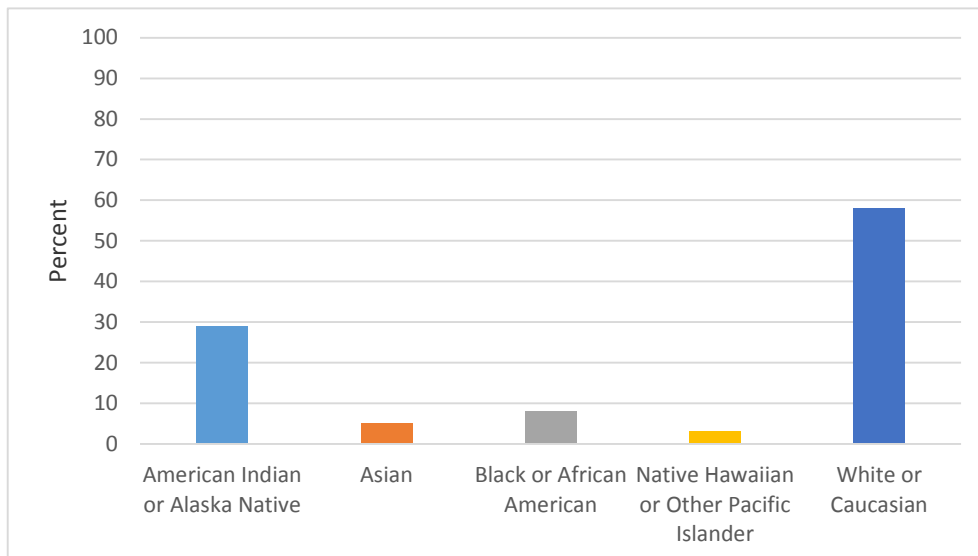

Figure 2b. Specific Latino Origin (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers

According to Figure 3, almost 60% of participants reported they were “White or Caucasian,” followed by 30% of participants who reported they were “American Indian or Alaska Native.” It should be noted many participants who responded they were of Hispanic or Latino origin in Figure 2 skipped this question.

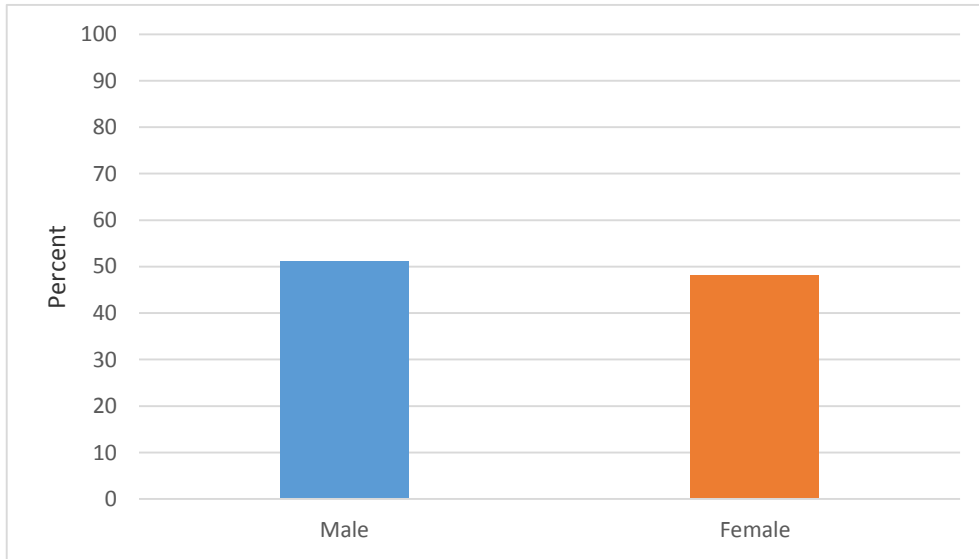

Figure 3. What is your race? (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers

As seen in Figure 4, there was almost an even split between the percentage of participants who reported they were “male” or “female” on the Entry Survey.

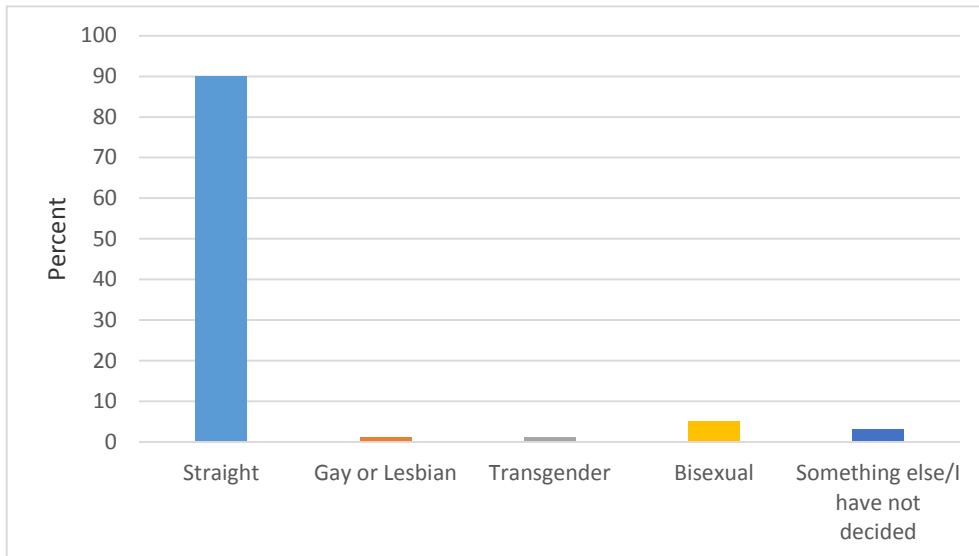

Figure 4. Are you male or female? (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers

Ninety percent of participants reported they were “Straight” in Figure 5, followed by five percent of participants who reported they were “Bisexual.” Less than one percent of participants reported being “Gay or Lesbian” or “Transgender.” About three percent reported they were “Something else/I have not decided.”

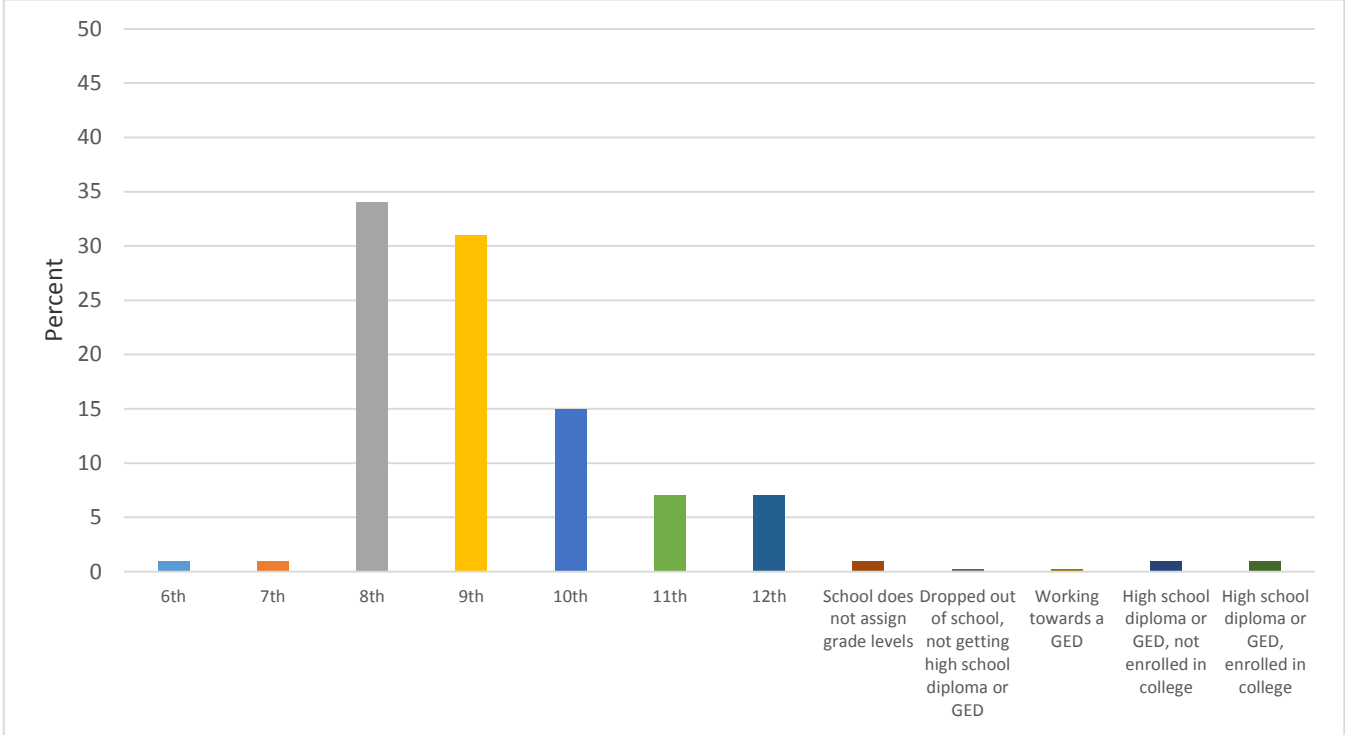

Figure 5. Do you consider yourself to be one or more of the following? (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers

Participant grade levels are shown in Figure 6. Thirty-five percent of participants reported they were in the “8th” grade on the Entry Survey, followed by 32% who reported they were in the “9th grade.” Fifteen percent of participants reported they were in the “10th” grade. Just over five percent of participants reported they were in the “11th” or “12th grade.

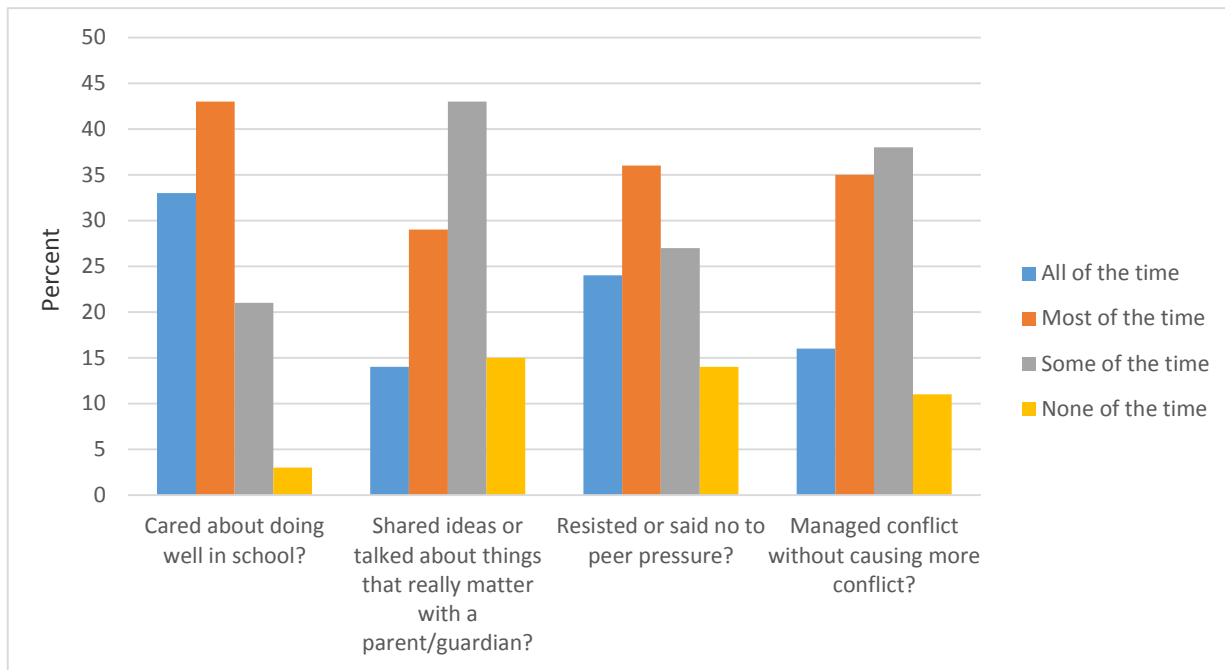

Figure 6. What grade are you in? (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers; Scale to 50%

Figure 7 shows how much participants engaged in certain behaviors in the previous 3 months. Forty-three percent of participants reported they cared about doing well in school “most of the time,” followed by 33% who reported “all of the time.” Forty-three percent of participants reported they shared ideas or talked about things that really matter with a parent/guardian “some of the time,” followed by 30% who reported “most of the time.” Thirty-five percent of participants reported they managed conflict without causing more conflict “most of the time.” Ten percent of participants they managed conflict “none of the time.”

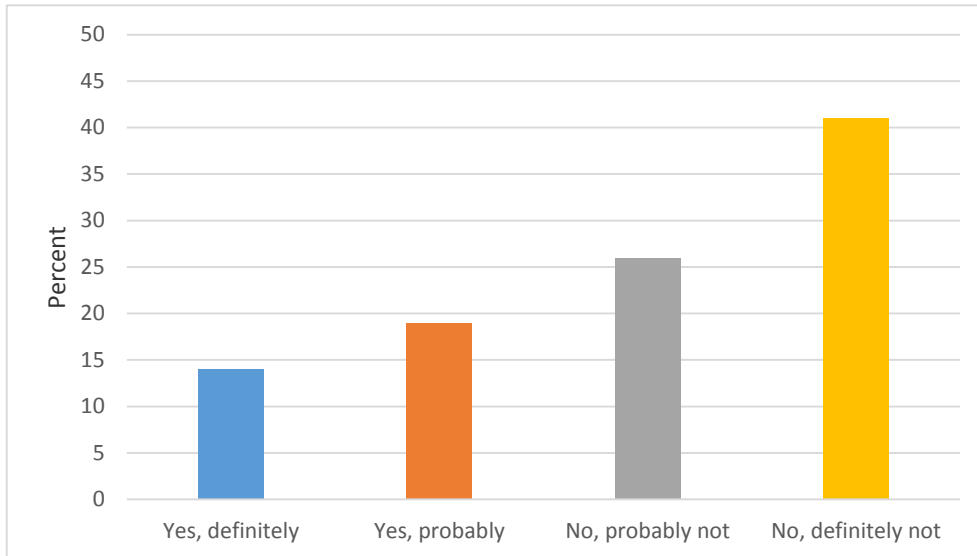

Figure 7. In the past 3 months, how often would you say you ... (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers; Scale to 50%

Just over 40% of participants reported “No, definitely not” when asked whether they intended to have sexual intercourse in the next 6 months, followed by a quarter of participants who reported “no, probably not.” Fourteen percent of participants reported “Yes, definitely” they intend to have sexual intercourse in the next 6 months.

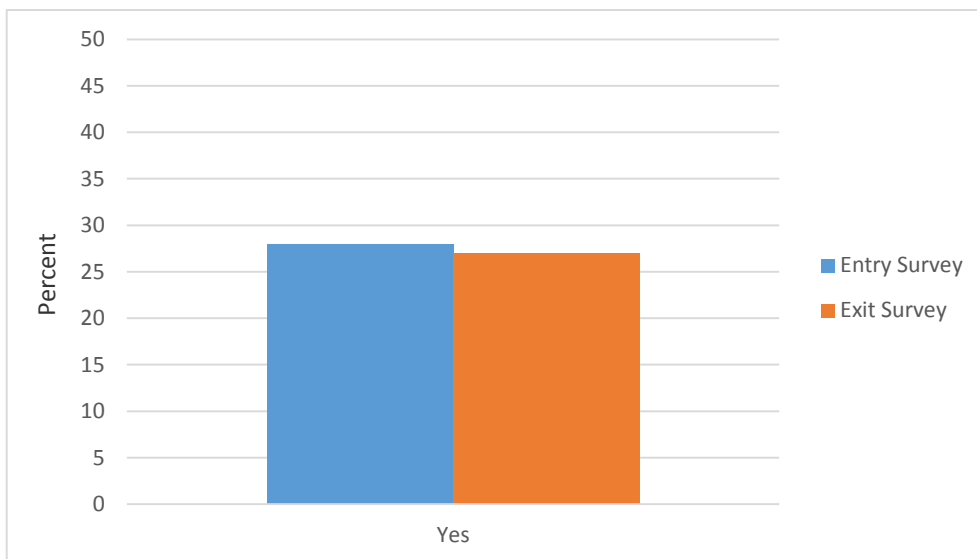

Figure 8. If you have the chance, do you intend to have sexual intercourse in the next 6 months? (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers; Scale to 50%

Figure 9 shows about a quarter of participants reported they have had sexual intercourse on the Entry and Exit Surveys.

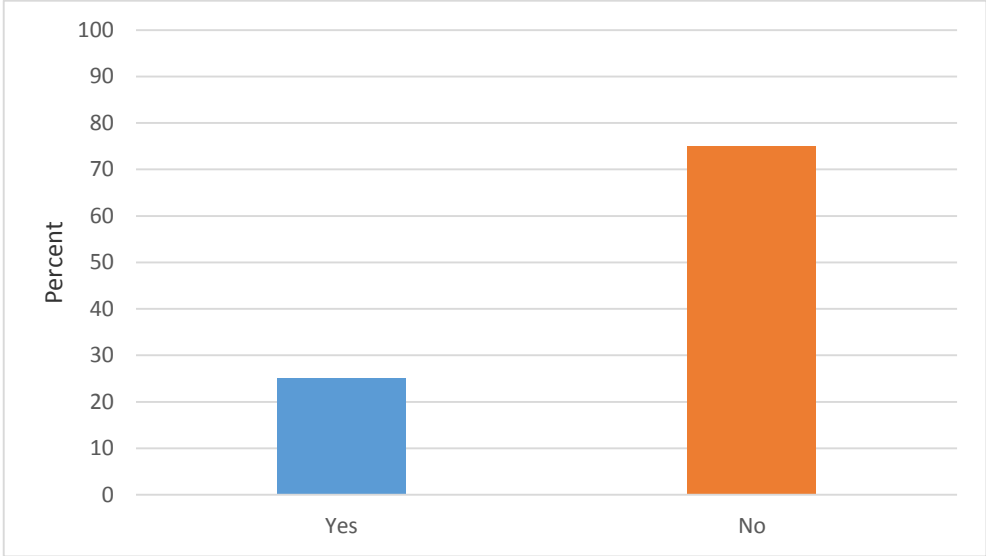

Figure 9. Have you ever had sexual intercourse?

Note: Percents may not add up to 100% due to rounding or missing answers; Scale to 50%

According to Figure 10, a quarter of participants who ever had sex reported they had ever been or gotten someone else pregnant.

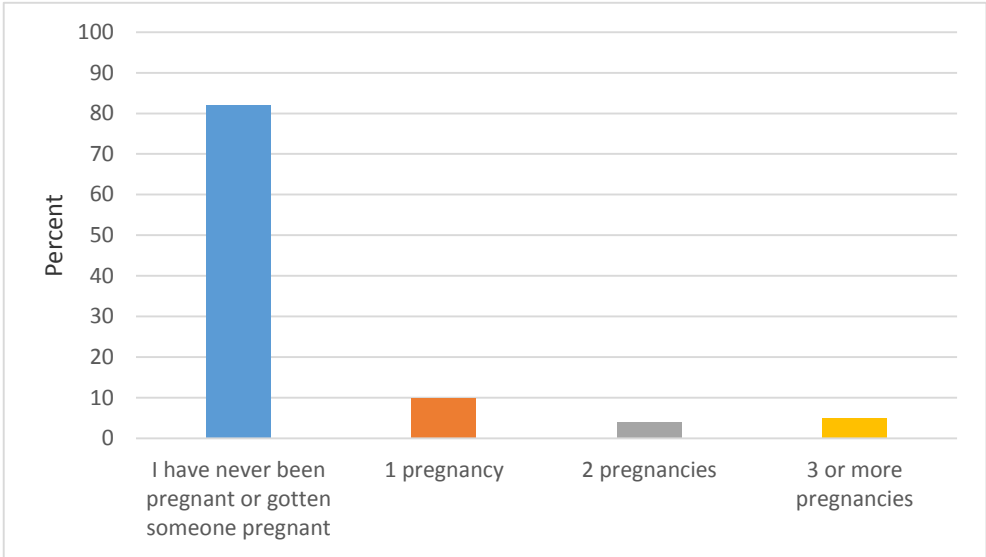

Figure 10. Among those who have had sexual intercourse: Have you ever been pregnant or gotten someone else pregnant, even if no child was born? (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 11 shows 80% of participants who have had sexual intercourse reported they “never been pregnant or gotten someone pregnant”, which is different than the 75% of participants who reported this in Figure 10. Ten percent of participants reported they had “1 pregnancy.” Five percent of participants reported they had “2 pregnancies” or “3 or more pregnancies.”

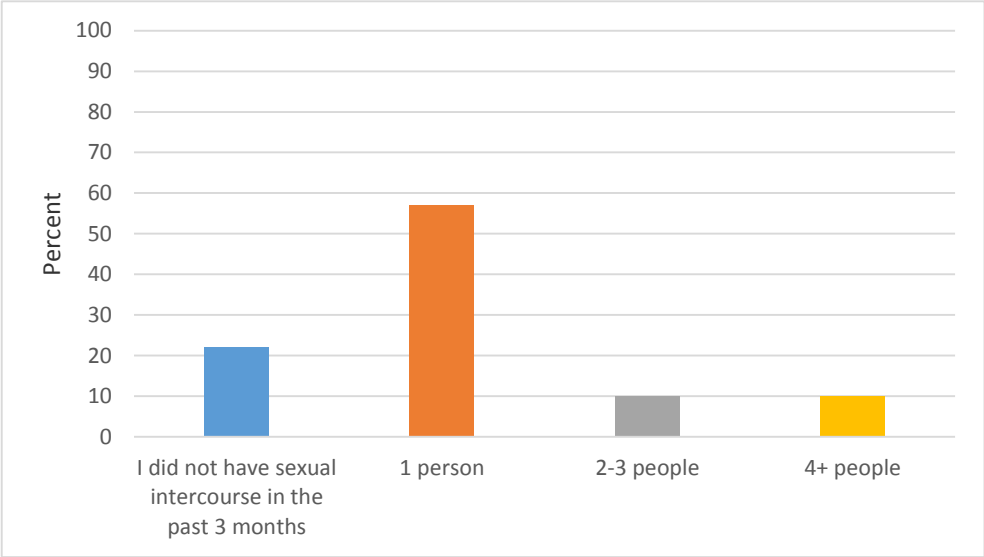

Figure 11. Among those who have had sexual intercourse: How many times have you been pregnant or gotten someone pregnant? (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers

Sexual partners in the past 3 months are depicted in Figure 12. Among participants who reported having sexual intercourse, just under 60% of participants reported they had sex with “1 person,” followed by 20% of participants who reported have not had sex in the past 3 months. Ten percent of participants reported they have had sex with “2-3 people” or “4+ people.”

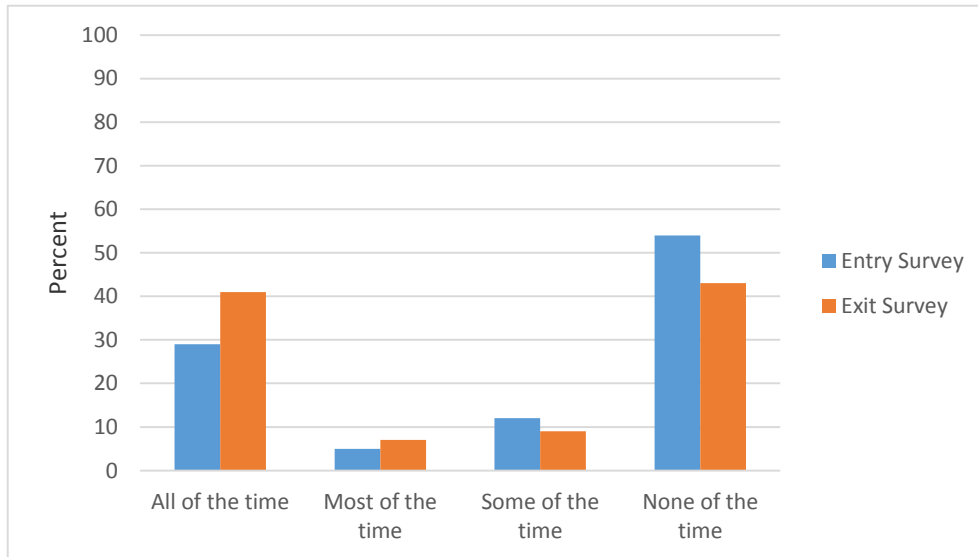

Figure 12. Among those who have had sexual intercourse: In the past 3 months, with how many people did you have sexual intercourse, even if only one time? (Entry Survey Only)

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 13 shows the percentage of sexually active youth who reported using birth control over the past 3 months. It should be noted birth control methods listed included: birth control pills, IUDs, rings, patches, condoms and other barrier and hormonal methods. Over half of sexually experienced participants reported “none of the time” on the Entry Survey, with this percentage falling to 43% on the Exit Survey. Thirty percent of participants reported they used birth control “all of them time” on the Entry Survey and increased to 40% on the Exit Survey. About five percent of participants reported using birth control “most of the time” across both surveys.

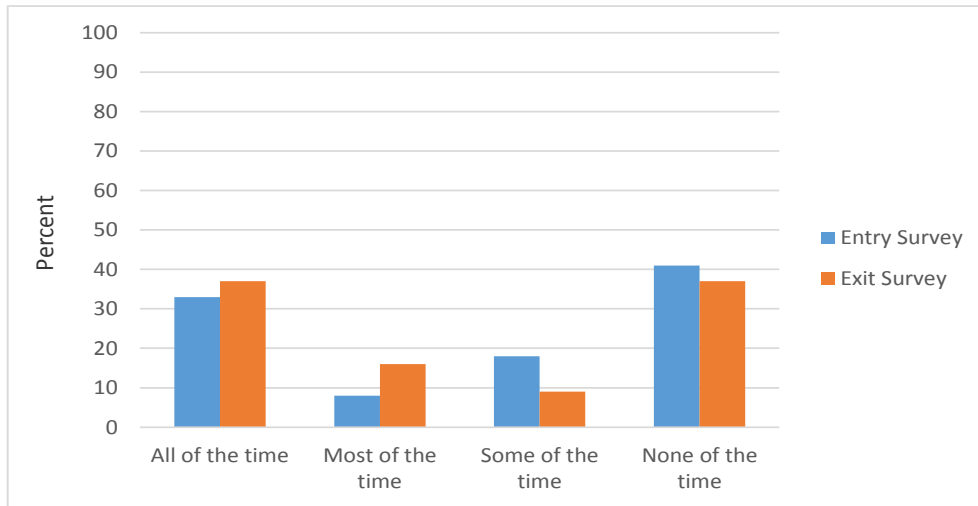

Figure 13. Among those who have had sexual intercourse: When you had sexual intercourse in the past 3 months, how often did you or a partner use birth control?

Note: Percents may not add up to 100% due to rounding or missing answers; Scale to 50%

Figure 14 highlights the percentage of sexually active participants who used condoms over the past 3 months. About 35% of participants reported they used condoms “all of the time” across the Entry and Exit Surveys. The percentage who reported “none of the time” went from 41% on the Entry Survey to 37% on the Exit Survey.

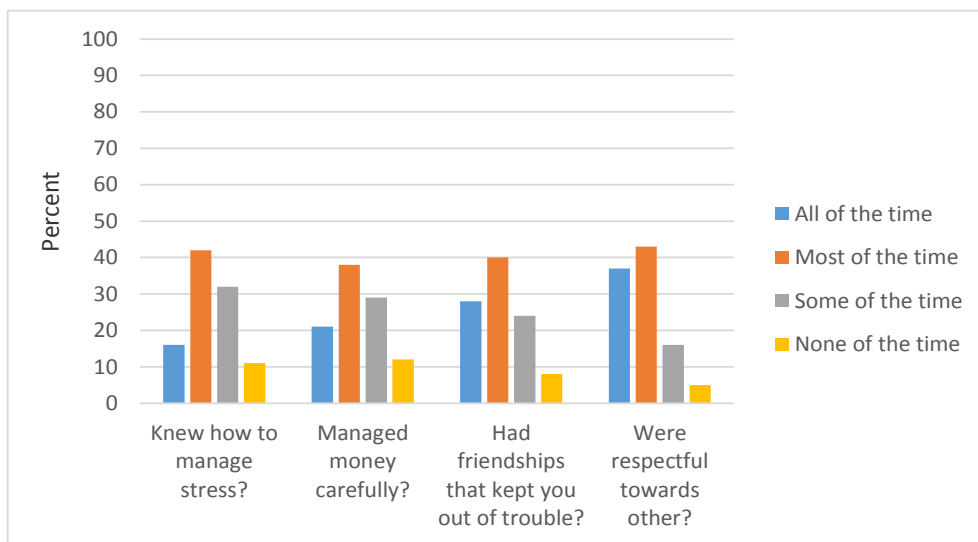

Figure 14. Among those who have sexual intercourse: When you had sexual intercourse in the past 3 months, how often did you or a partner use a condom?

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 15 shows actions that participants have performed over the past 3 months. These questions were asked on the Entry Survey only. Over half of participants reported they knew how to manage stress “all of the time” and “most of the time.” Forty percent participants reported they had managed money carefully “most of the time.” Sixty-five percent of participants reported they had friendships that kept them out of trouble “all of the time” and “most of the time.” Eight percent reported “none of the time” to this. Three-quarters of participants reported they were respectful towards others “all of the time” and “most of the time.”

Figure 15. In the past 3 months, how often would you say you ... (Entry Survey Only)

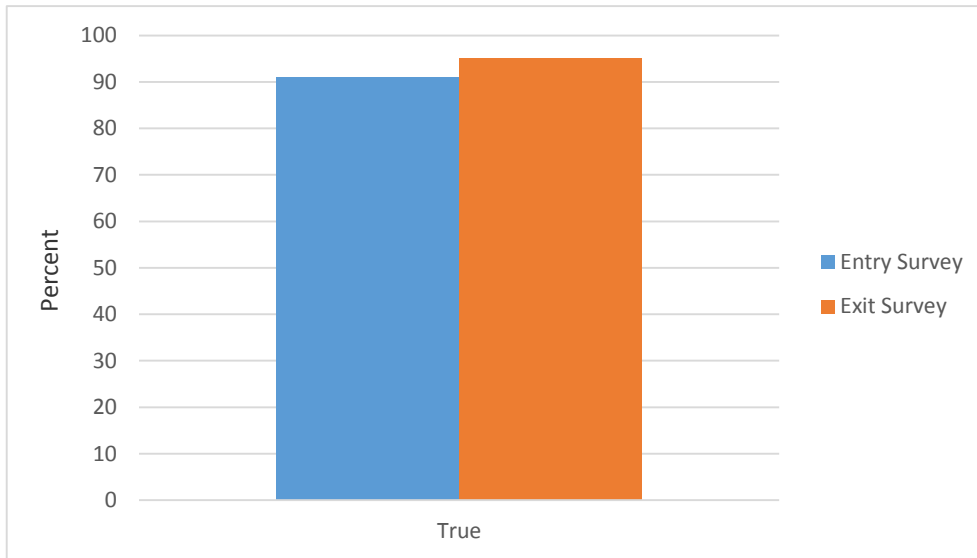

Note: Percents may not add up to 100% due to rounding or missing answers; Scale to 50%

Figure 16 to Figure 22 are STI/HIV/Unintended Pregnancy Knowledge and Behavioral Intention questions. Figures 23 and 24 measure cultural adhesion and ethnic pride. Figure 16 to Figure 24 are asked on the Entry Survey and Exit Survey.

According to Figure 16, just over 90% of participants reported “true,” anyone can have sexually transmitted diseases, including HIV/AIDS on the Entry Survey, with this percentage being 95% on the Exit Survey.

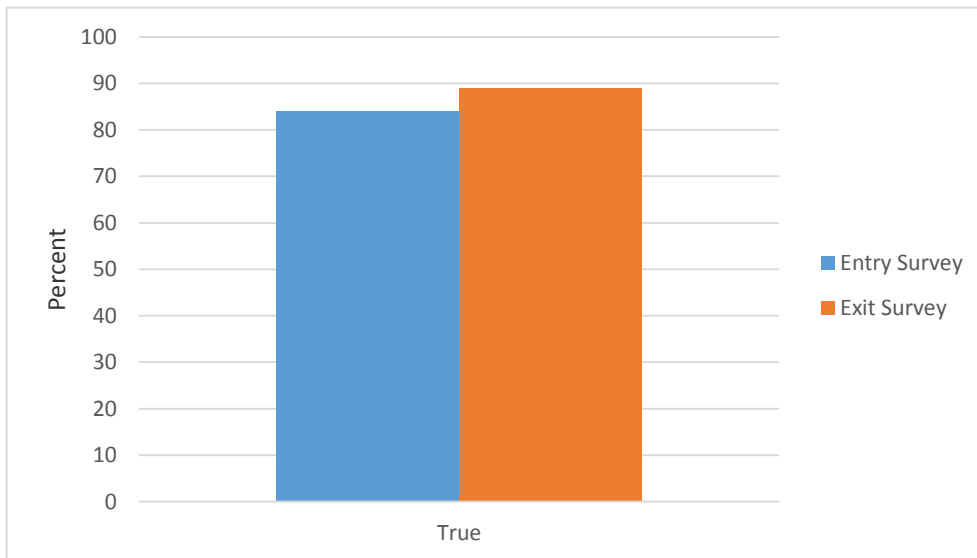

Figure 16. Anyone can have sexually transmitted diseases, including HIV/AIDS

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 17 shows participants knowledge about the four fluids that transmits HIV. Eighty-five percent of participants reported “true” on the Entry Survey, with this percentage being almost 90% on the Exit Survey.

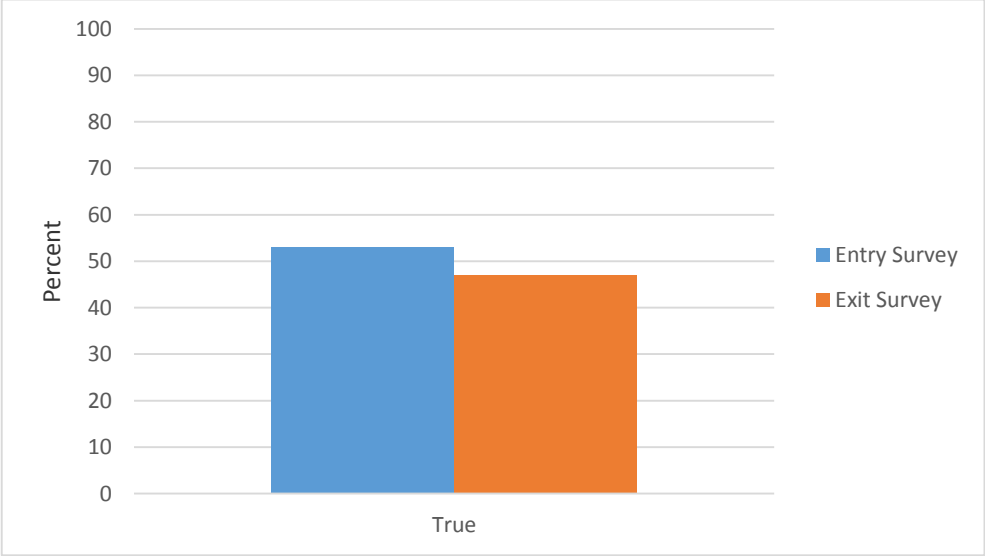

Figure 17. One can only be infected by HIV by coming in contact with infected blood, semen, breast milk or vaginal secretions.

Note: Percents may not add up to 100% due to rounding or missing answers

Participants’ knowledge about STD symptoms is depicted in Figure 18. About 55% of participants reported “true,” STDs, including HIV, always have symptoms. On the Exit Survey, under 45% of participants reported “true.” This is the correct directionality for this question, as Cuidate! emphasizes that STDs, including HIV, may be present but not have any symptoms.

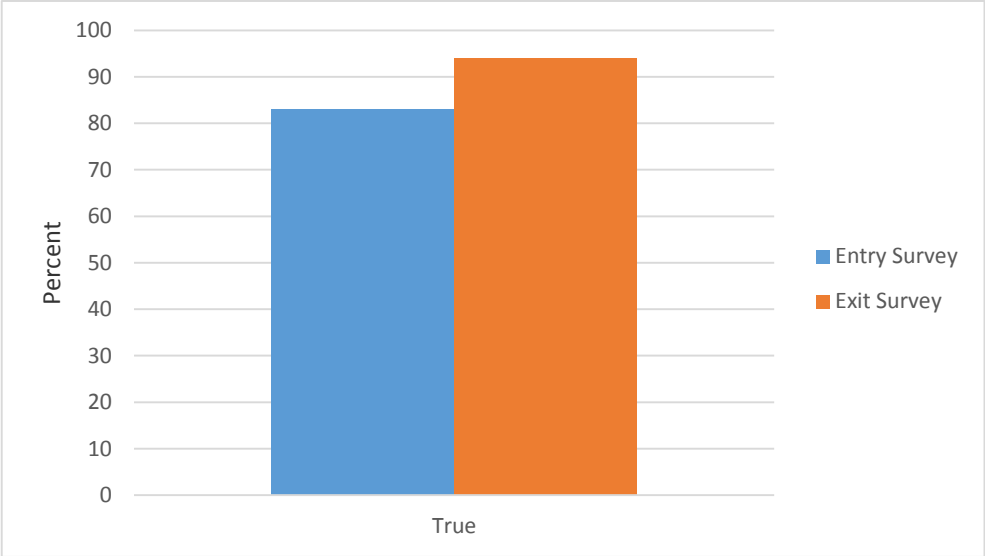

Figure 18. STDs, including HIV, always have symptoms.

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 19 shows the percentage of participants who reported “true,” girls can get pregnant the first time she had sex. About 85% of participants reported “true” on the Entry Survey; about 95% of participants reported this on the Exit Survey.

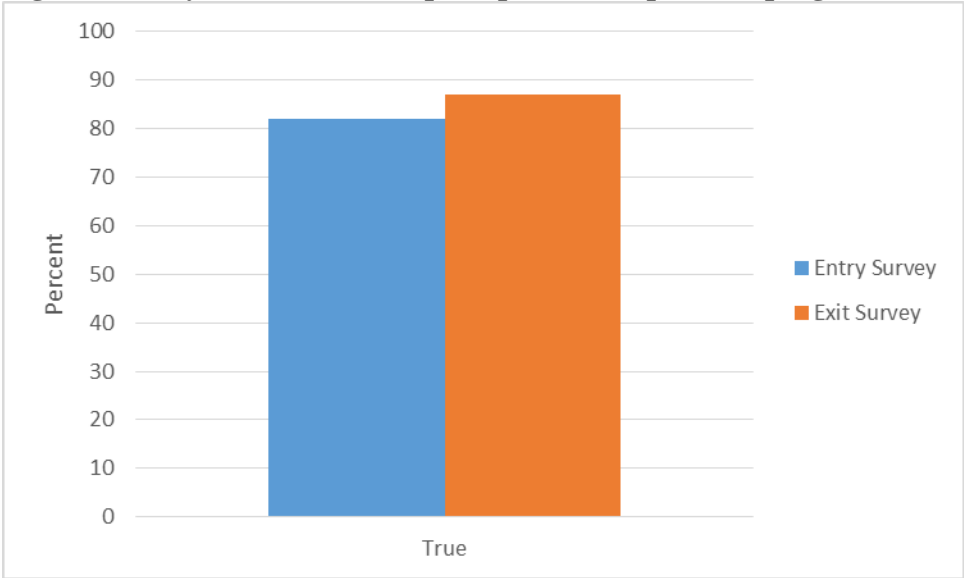

Figure 19. A girl can get pregnant the first time she has sex.

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 20 shows participants’ belief in the male role of preventing pregnancies. Eighty-two percent of participants reported “true” on the Entry Survey, with eighty-seven percent of participants reporting this on the Exit Survey.

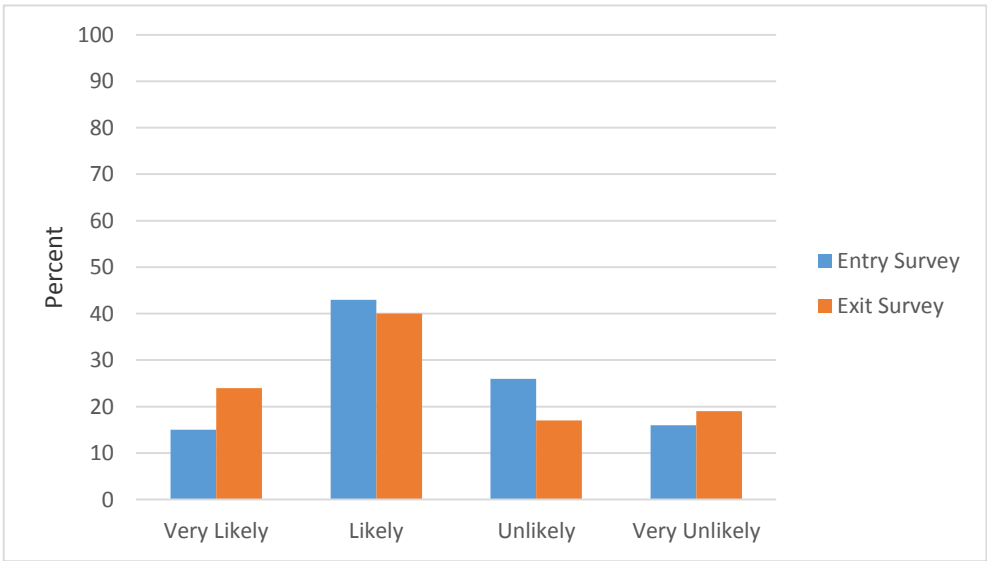

Figure 20. Boys should take steps to prevent unplanned pregnancies

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 21 shows the likeliness of participants to get tested for STDs/HIV annually if they are sexually active. On the Entry Survey, just over 15% of participants reported they would be “very likely” to get tested, with a quarter of participants reporting this on the Exit Survey. The percentage who reported “unlikely” went from 26% on the Entry Survey to 17% of participants on the Exit Survey.

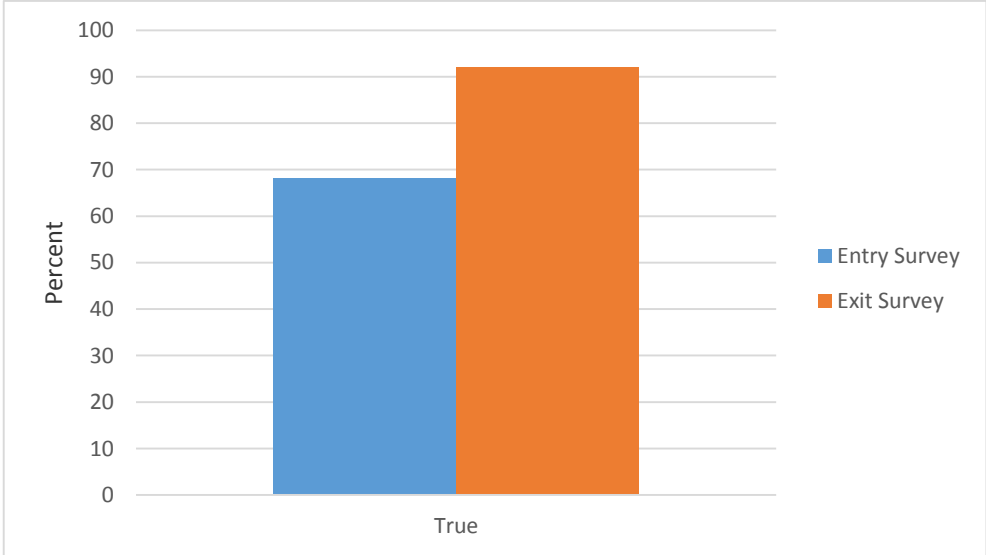

Figure 21. How likely is it that you will get tested for STDs, including HIV/AIDS, each year if you are sexually active?

Note: Percents may not add up to 100% due to rounding or missing answers; Scale to 50%

Condom use skills are depicted in Figure 22. On the Entry Survey, almost 70% of participants reported “true,” they knew how to put on a condom correctly; on the Exit Survey, 92% of participants reported this.

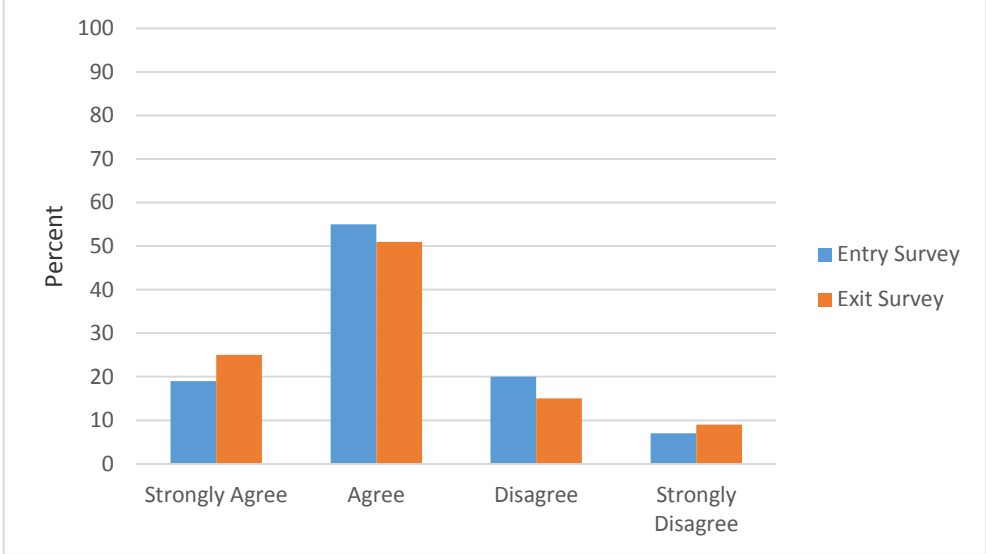

Figure 22. I know how to put on a condom correctly.

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 23 shows just under 20% of participants reported they “strongly agree” they participate in cultural celebrations of their ethnic group on the Entry Survey, with a quarter of participants reporting this on the Exit Survey. Just over half of participants reported they “agree” across both surveys. Eight percent of participants reported they “strongly disagree” across both surveys.

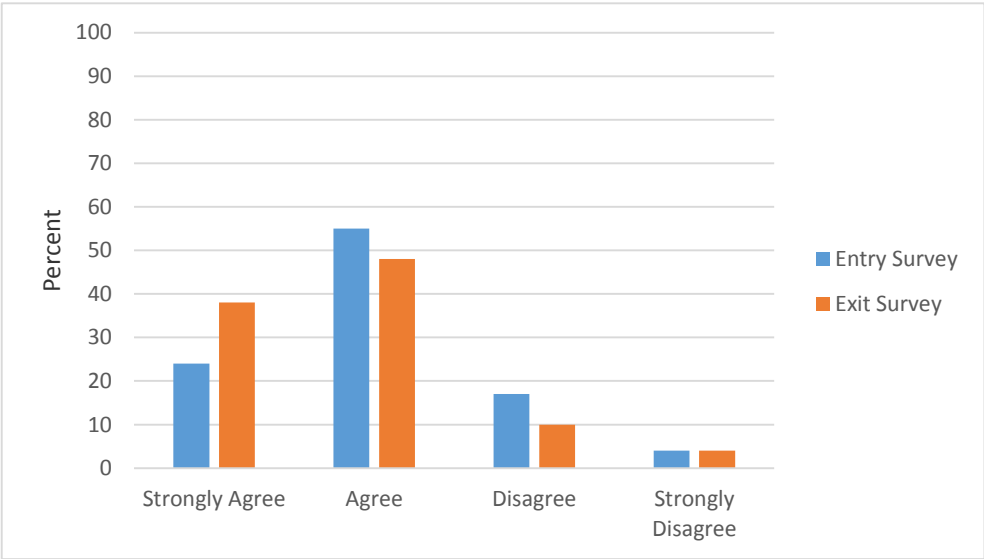

Figure 23. I participate in cultural celebrations, practices and traditions of my ethnic group, such as specific food, music or customs.

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 24 depicts participant pride in their ethnic group. A quarter of participants reported they “strongly agree” they have a lot of pride in their ethnic group” with 38% of participants reporting this on the Exit Survey. Fifty-five percent of participants reported they “agree” on the Entry Survey, compared to just under half of participants who reported this on the Exit Survey. Four percent of participants reported they “strongly disagree” across both surveys.

Figure 24. I have a lot of pride in my ethnic group.

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 25 to Figure 30 are Positive Youth Development questions that mirror the questions on the Oregon Healthy Teens Survey. These indicators are asked on the Entry Survey only.

Almost three-quarters of participants reported their physical health was “very good” and “good,” as seen in Figure 25. Fifteen percent of participants reported their physical health was “excellent;” ten percent reported it was “fair.”

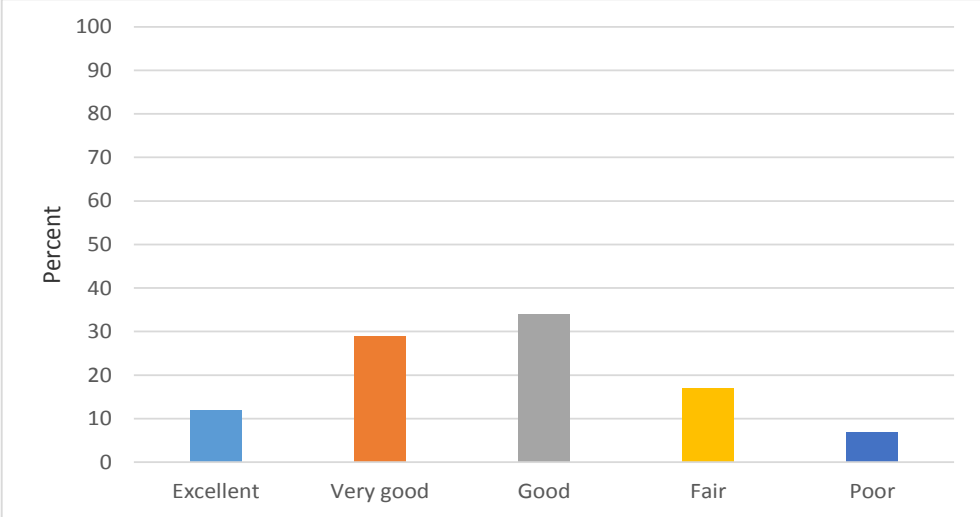

Figure 25. Would you say that in general your physical health is ...

Note: Percents may not add up to 100% due to rounding or missing answers

In Figure 26, just over sixty percent of participants reported their emotional and mental health was “very good” and “good,” followed by 15% of participants who reported it was “fair.” Just over 10% of participants reported their emotional and mental health was “excellent;” seven percent reported it was “poor.”

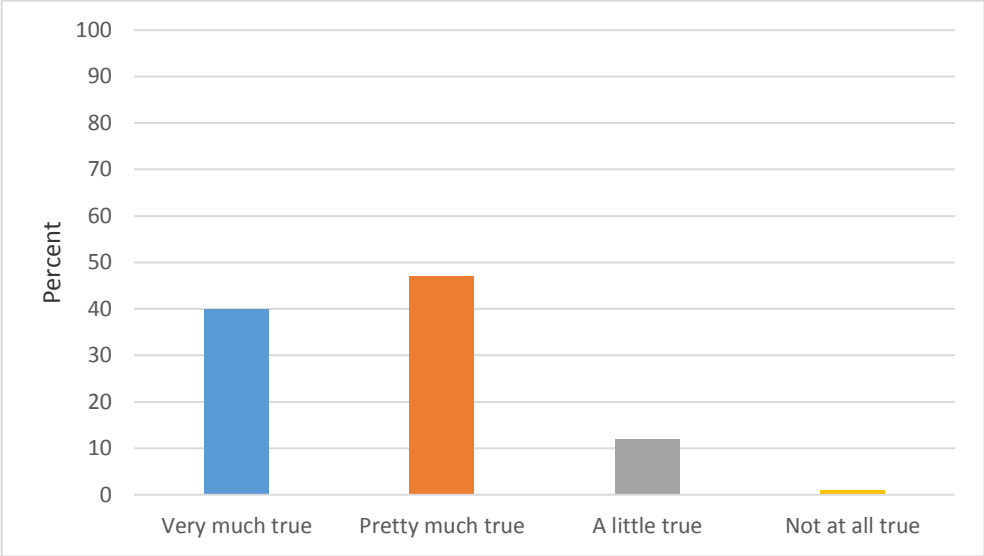

Figure 26. Would you say that in general your emotional and mental health is ...

Note: Percents may not add up to 100% due to rounding or missing answers

According to Figure 27, 85% of participants reported it was “very much true” and “pretty much true” they can do most things if they try. Ten percent of participants reported this was “a little true.” Only one percent reported it was “not at all true.”

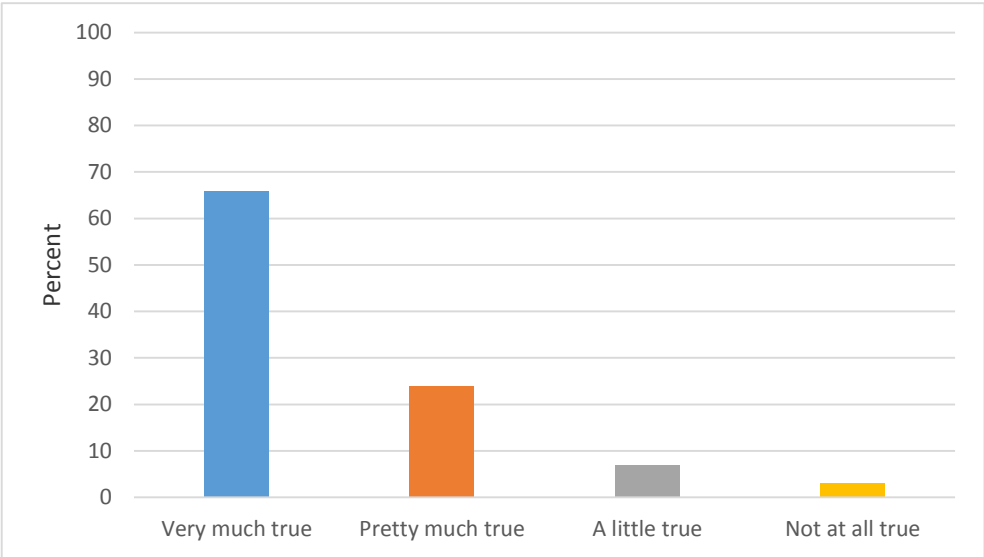

Figure 27. I can do most things if I try.

Note: Percents may not add up to 100% due to rounding or missing answers

Ninety percent of participants reported it was “very much true” and “pretty much true” they had one adult in their life that cared about them. Seven percent reported this was “a little true,” while three percent reported it was “not at all true.”

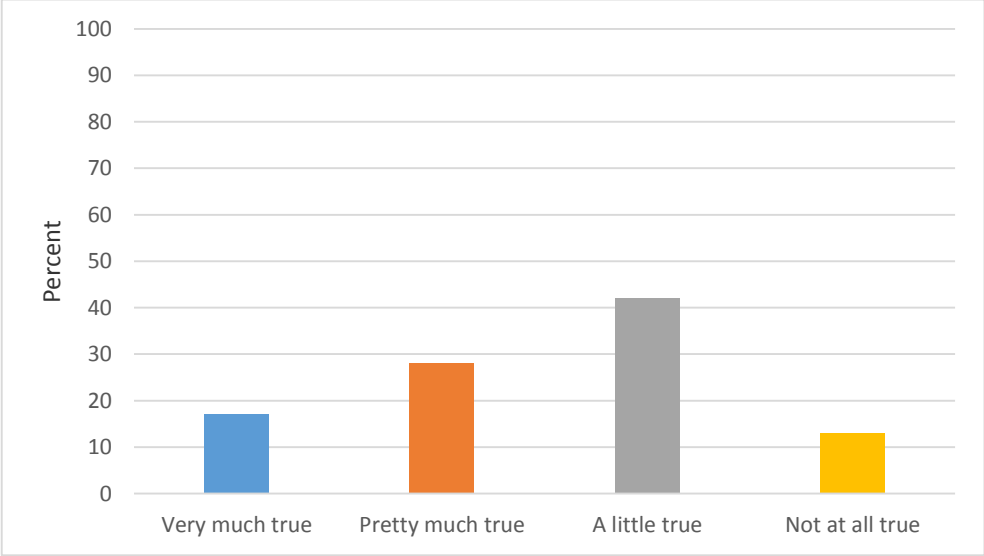

Figure 28. There is at least one adult in my life that really cares about me.

Note: Percents may not add up to 100% due to rounding or missing answers

Participants' volunteer efforts in their community are depicted in Figure 29. Just over 40% of participants reported it was "a little true" they volunteered to help others in their community, followed by 30% who reported this was "pretty much true." About 15% of participants reported this was "very much true." Ten percent report it was "not at all true."

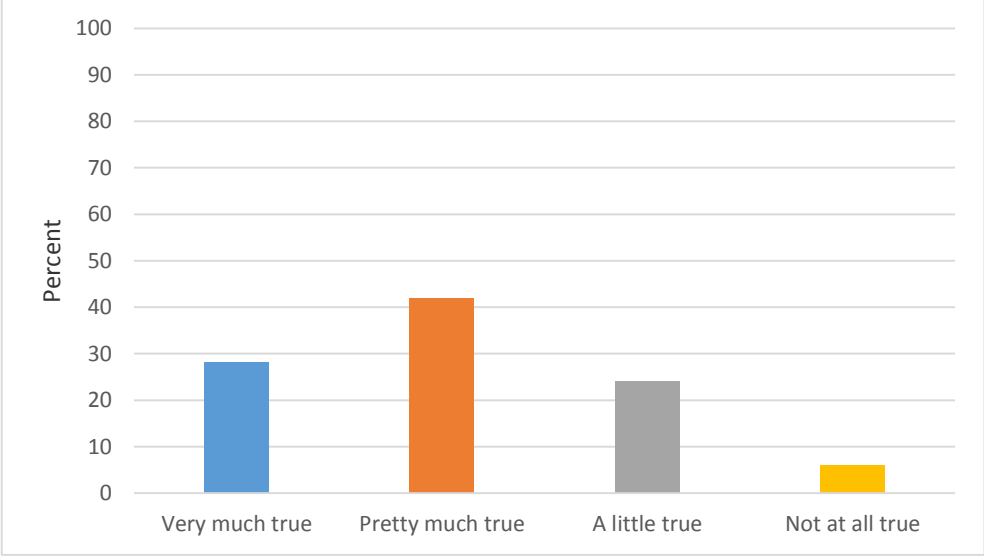

Figure 29. I volunteer to help others in my community.

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 30 shows participants' ability to work out their problems. Seventy percent of participants reported it was "very much true" and "pretty much true" they can work out their problems, followed by a quarter of participants who reported it was "a little true." Five percent of participants reported it was "not at all true."

Figure 30. I can work out my problems.

Note: Percents may not add up to 100% due to rounding or missing answers

Figures 31A and 31B is a multi-part question that is asked on the Exit Survey only with the intent of measuring program impact on the participants' future behaviors and goals.

Figure 31A

Resist or say no to peer pressure – Thirty-seven percent of participants reported they will be “much more likely” to resist or say no to peer pressure. Five percent of participants reported they will be “somewhat less likely” or “much less likely.”

Know how to manage stress – Twenty percent of participants reported they will be “much more likely” to know how to manage stress, while 40% of participants reported they will be “somewhat more likely.”

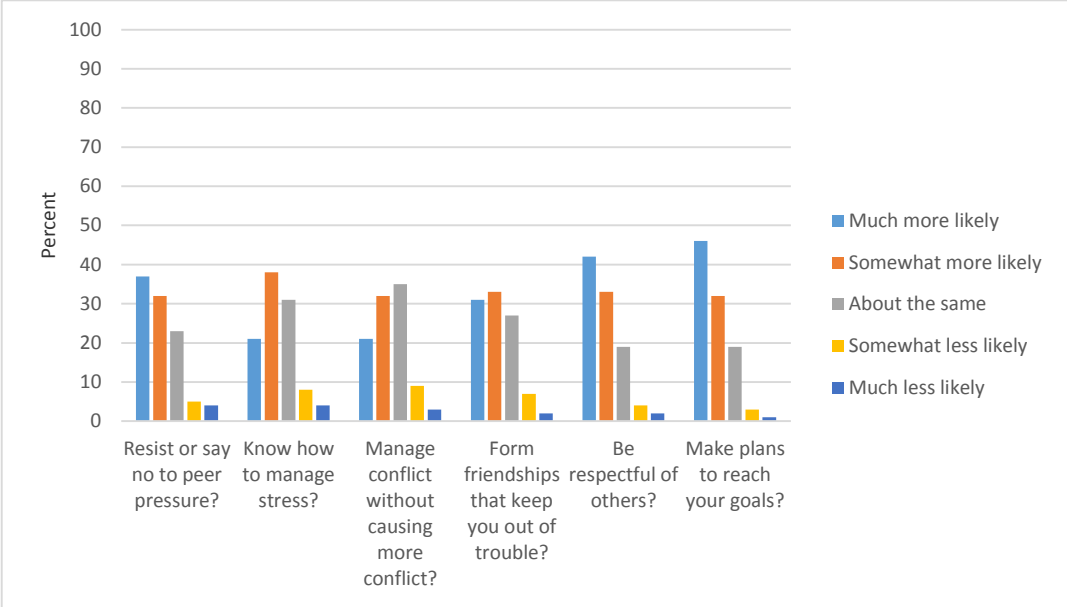

Manage conflict without causing more conflict – Half of participants reported they will be “much more likely” and “somewhat more likely” to manage conflict without causing more conflict. Ten percent of participants reported they will be “somewhat less likely.”

Form friendships that keep you out of trouble – Sixty-five percent of participants reported they will be “much more likely” and “somewhat more likely” to form friendships that keeps them out of trouble; while 27% reported they will be “about the same.”

Be respectful of others – Three-quarters of participants reported they will be “much more likely” and “somewhat more likely” to be respectful of others. Two percent of participants reported they will be “much less likely.”

Make plans to reach your goals – Three-quarters of participants reported they will be “much more likely” and “somewhat more likely” to make plans to reach their goals, followed by 20% of participants who reported they will be “about the same” to make plans to reach your goals.

Figure 31A. Even if your program didn't cover a topic, would you say that being in the program has made you more likely, about the same, or less likely to ...

Note: Percents may not add up to 100% due to rounding or missing answers; Scale to 50%

Figure 31B

Care about doing well in school – Just under 80% of participants reported they will be “much more likely” and “somewhat more likely” to care about doing well in school. Fifteen percent of participants reported they will be “about the same.”

Get a steady job after you finish school – Over three-quarters of participants reported they will be “much more likely” and “somewhat more likely” to get a steady job after they finish school. Two percent of participants reported they will be “somewhat less likely” or “much less likely.”

Share ideas or talk about things that really matter with a parent/guardian – Seventy percent of participants reported they will be “much more likely” and “somewhat more likely” to share ideas or talk about things that matter with their parent/guardian. Five percent of participants reported they will be “somewhat less likely” or “much less likely.”

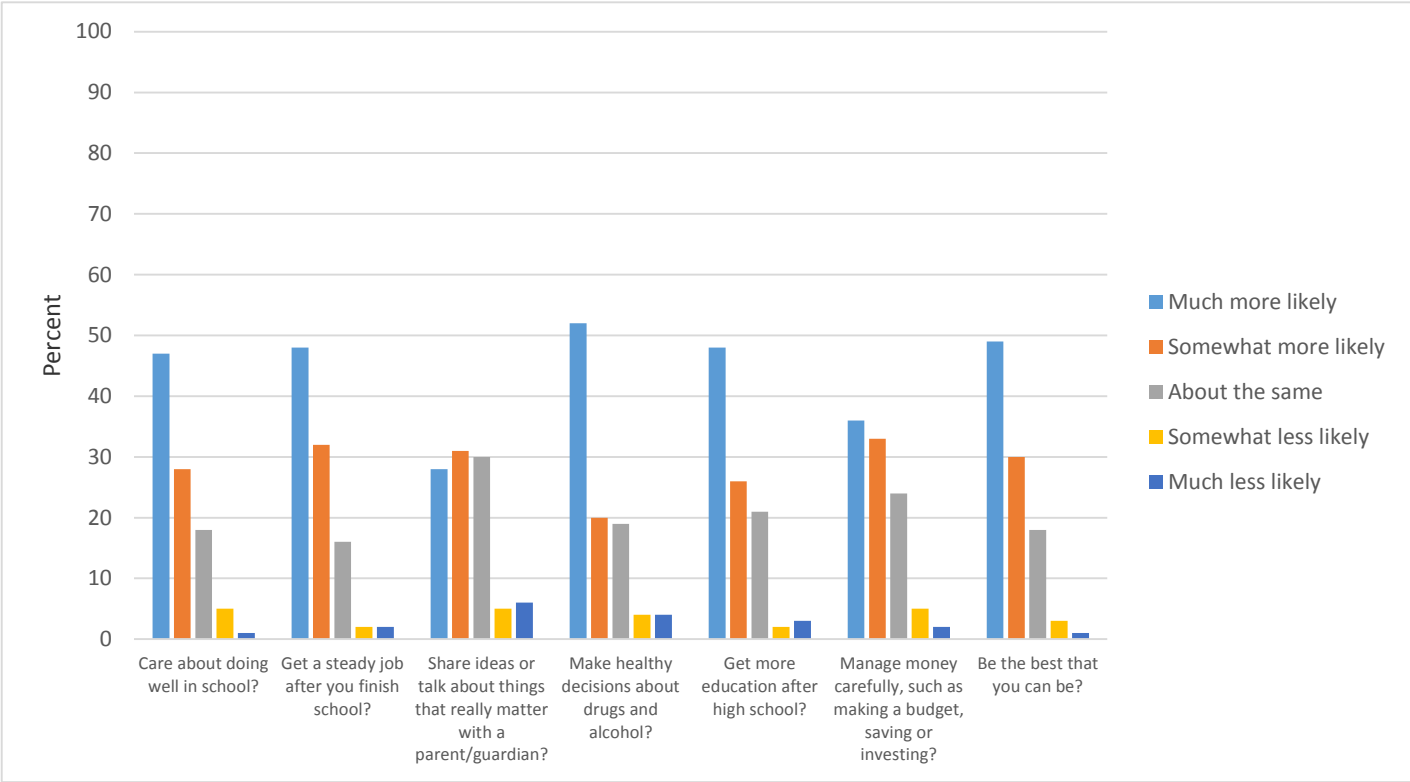

Make healthy decisions about drugs and alcohol – Almost three-quarters of participants reported they will be “much more likely” and “somewhat more likely” to make healthy decisions about drugs and alcohol. Four percent of participants reported they will be “somewhat less likely” or “much less likely.”

Get more education after high school – Three-quarters of participants reported they will be “much more likely” and “somewhat more likely” to get more education after high school, followed by a quarter of participants who reported they will be “about the same.”

Manage money carefully, such as making a budget, saving or investing – About 75% of participants reported they will be “much more likely” and “somewhat more likely” to manage money carefully. A quarter of participants reported they will be “about the same.”

Be the best you can be – Eighty percent of participants reported they will be “much more likely” and “somewhat more likely” to be the best they can be. Fifteen percent reported they will be “about the same.”

Figure 31B. Even if your program didn't cover a topic, would you say that being in the program has made you more likely, about the same, or less likely to ...

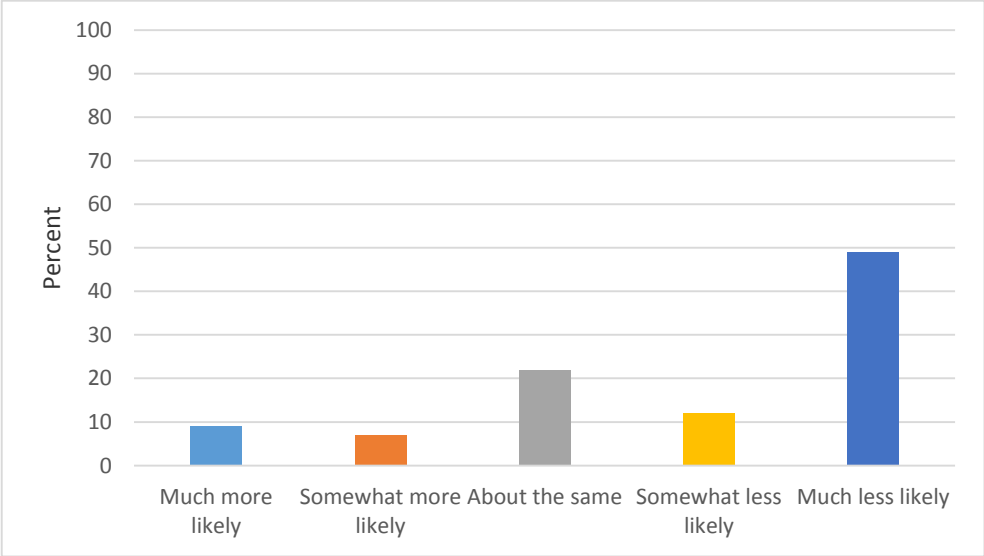

Note: Percents may not add up to 100% due to rounding or missing answers

Figures 32A-D are indicators pertaining to potential program impact on participants' future sexual intentions and/or behaviors. These questions are asked on the Exit Survey only.

According to Figure 32A, half of participants reported they will be “much less likely” to have sexual intercourse after being in the program. Twenty percent of participants reported they will engage in sexual intercourse “about the same.” About 10% of participants reported they will be “somewhat less likely” or “much more likely.”

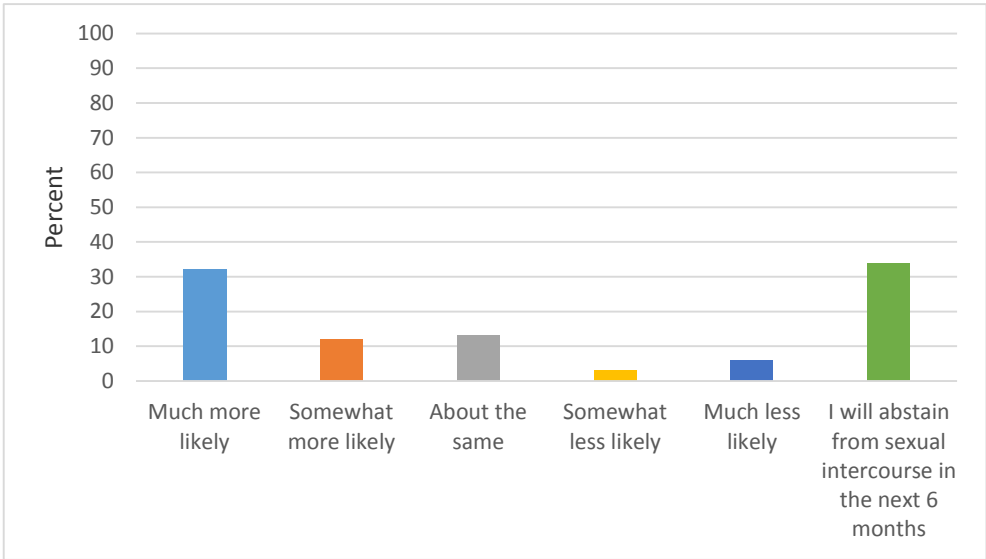

Figure 32A. Would you say that being in the program has made you more likely, about the same or less likely to ... Have sexual intercourse in the next 6 months?

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 32B shows participants' likelihood of using birth control if they have sexual intercourse in the next 6 months. Thirty percent of participants reported they will be “much more likely” to abstain from sexual intercourse in the next 6 months or they “will abstain from sexual intercourse.” Ten percent of participants reported they will be “somewhat more likely” or “about the same.”

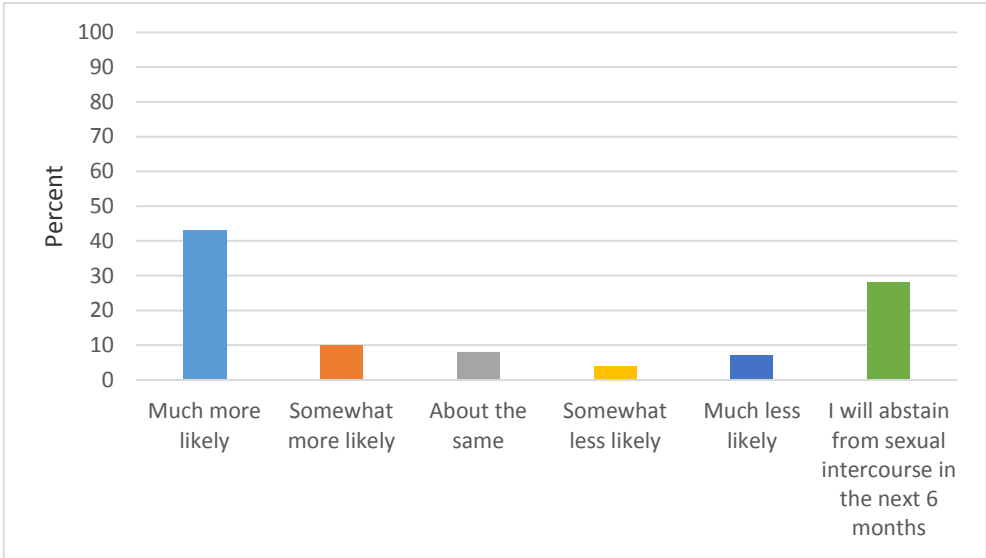

Figure 32B. Would you say that being in the program has made you more likely, about the same or less likely to ... Use (or ask your partner to use) birth control if you have sexual intercourse in the next 6 months?

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 32C pertains to intended condom use if participants were to have sexual intercourse in the next 6 months. Forty percent of participants reported they will be “much more likely” to use condoms if they have sexual intercourse, followed by 30% of participants who reported they “will abstain from sexual intercourse in the next 6 months.” About 10% of participants reported they will be “somewhat more likely” or “about the same” to use condoms.

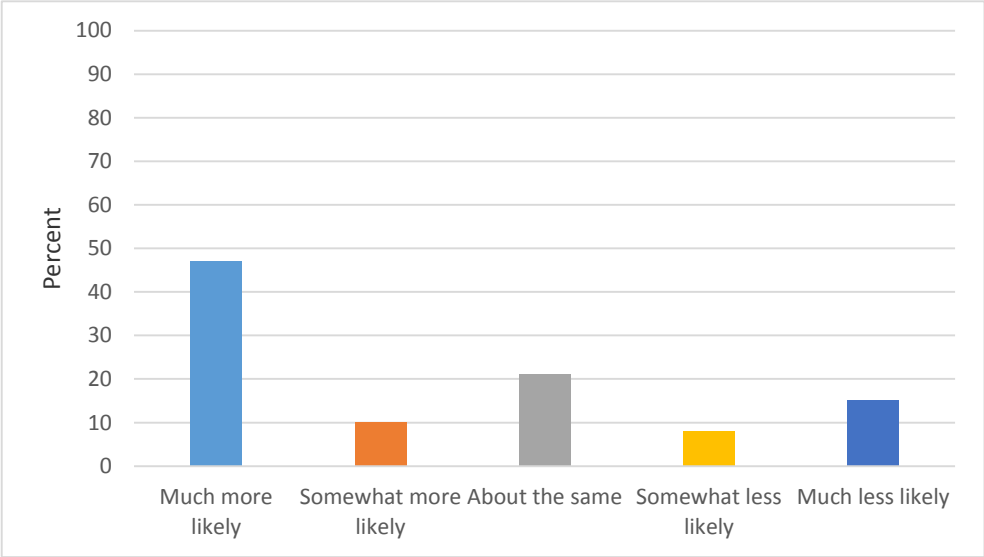

Figure 32C. Use (or ask your partner to use) a condom if you have sexual intercourse in the next 6 months?

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 32D discusses participants’ intention to abstain from sexual intercourse in the next 6 months. Just under half of participants reported they will be “much more likely” to abstain from sexual intercourse in the next 6 months, followed by about 20% who reported it will be “about the same.” Fifteen percent of participants reported they will be “much less likely” to abstain. Ten percent of participants reported they will be “somewhat more likely.”

Figure 32D. Abstain from sexual intercourse in the next 6 months?

Note: Percents may not add up to 100% due to rounding or missing answers

Figures 33 and 34 explores participants’ interest and experiences in the program. These questions are asked on the Exit Survey only.

Figure 33

Did you feel interested in program sessions and classes – Sixty-five percent participants reported they were interested in program sessions and classes “all of the time” and “most of the time.” About five percent of participants reported they were interested “a little of the time” or “none of the time.”

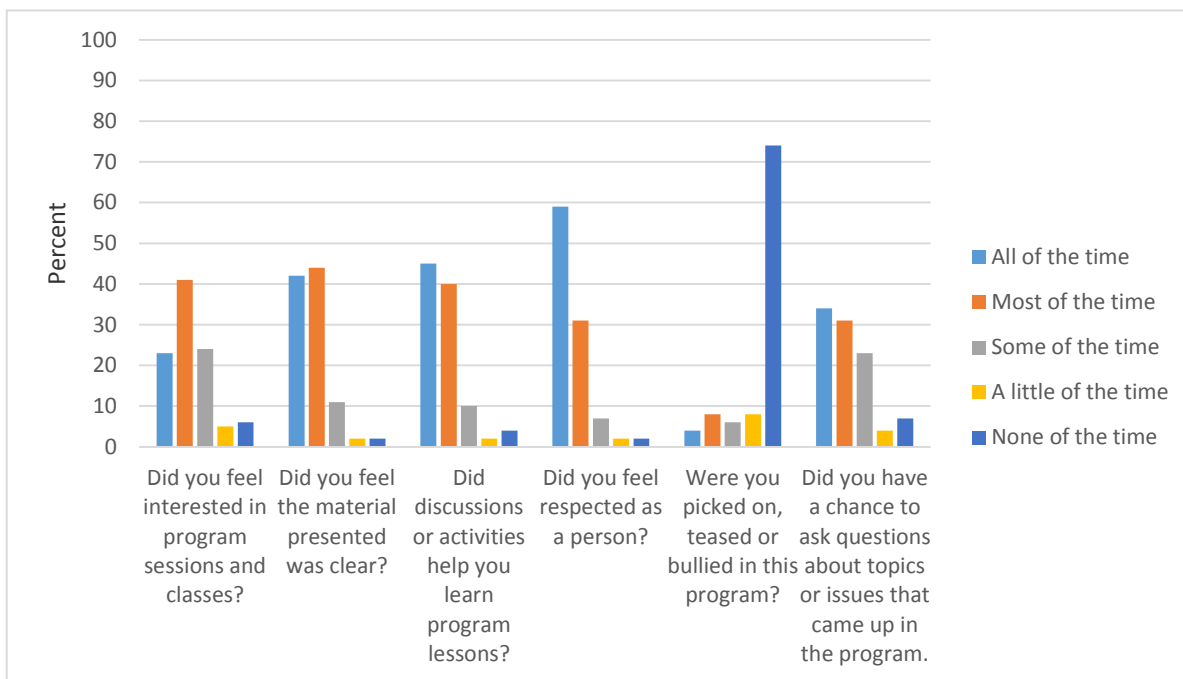

Did you feel the material presented was clear – Eighty percent of participants reported they felt the material presented was clear “all of the time” and “most of the time.” Less than three percent of participants reported this “a little of the time” or “none of the time.”

Did discussions or activities help you learn program lessons – About 40% of participants reported discussions and activities helped them learn program lessons “all of the time” or “most of the time.” Ten percent of participants reported “some of the time.”

Were you picked on, teased or bullied in this program – Three-quarters of participants reported they were picked on or bullied “none of the time.”

Did you have a chance to ask questions about topics or issues that came up in the program – Over 60% of participants reported they had a chance to ask questions “all of time” and “most of the time.” A quarter of participants reported “some of the time.” About five percent of participants reported “a little of time.”

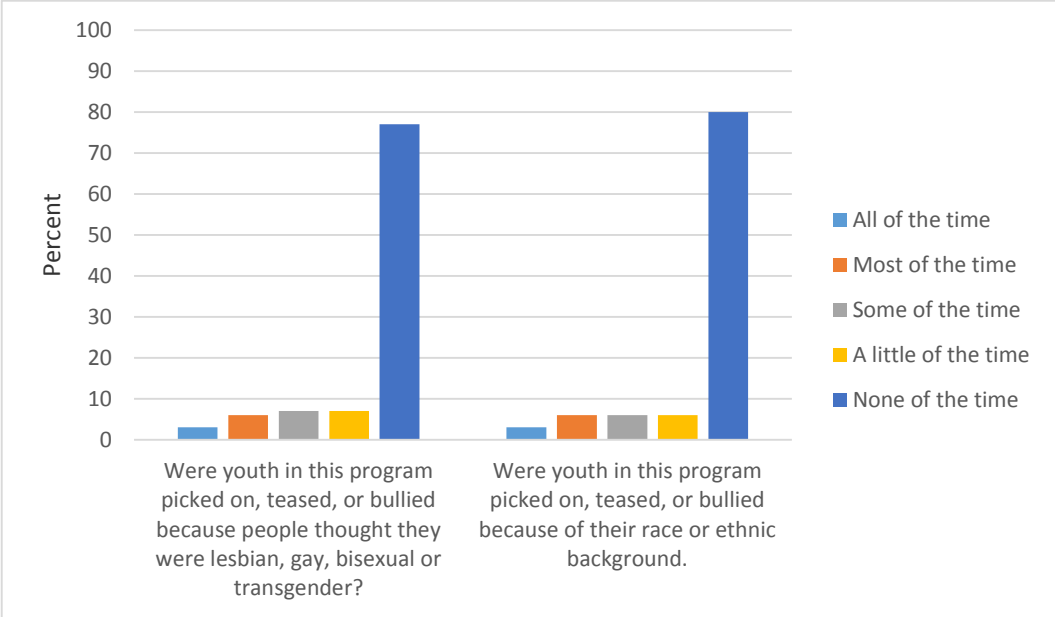

Figure 33. Participants’ Interests and Experience in the Program

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 34 depicts participants' perception of bullying and teasing in the program. About 80% of participants reported youth were picked on, teased or bullied because they were LGBTQ and / or their ethnic background "none of the time."

Figure 34. Bullying and Teasing in Program

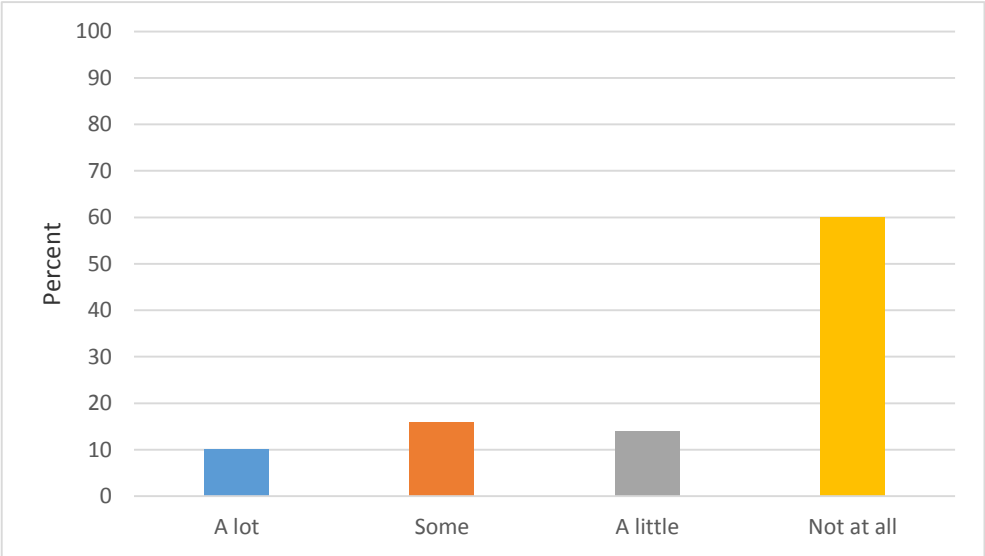

Note: Percents may not add up to 100% due to rounding or missing answers

Figure 35 and 36 examines participants’ perceived impact of immigration policies on their education opportunities and reproductive health access. These questions are asked on the Exit Survey only.

Figure 35 shows that almost 60% of participants reported immigration policies have affected their educational opportunities “not at all,” followed by 15% of participants who reported “some.” About 10% of participants reported “a lot.”

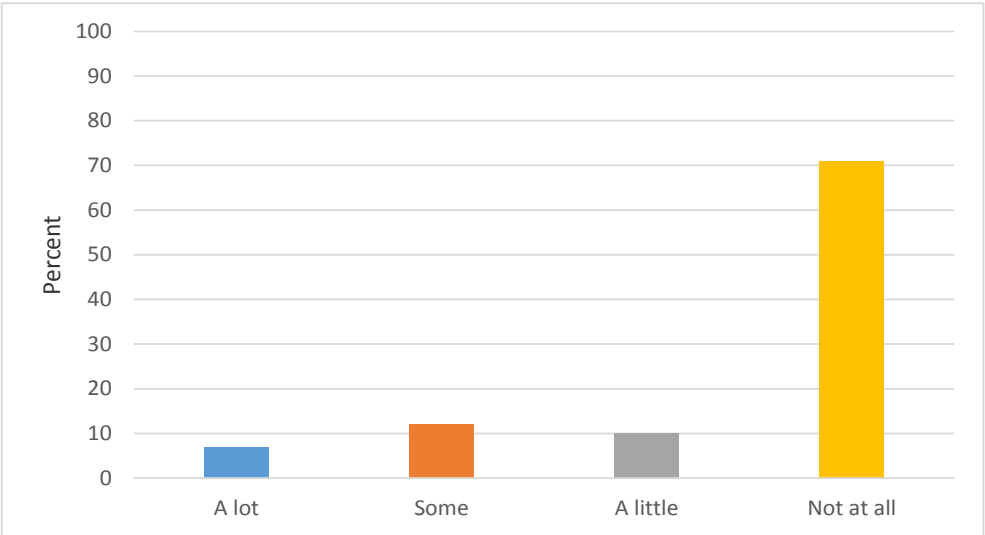

Figure 35. How much immigration policies affected your educational opportunities?

Note: Percents may not add up to 100% due to rounding or missing answers

According to Figure 36, 70% of participants who reported immigration policies affected their ability to access reproductive health services “not at all.” About 10% of participants reported their access has been affected “some” or “a little.” About five percent of participants reported their access has been affected “a lot.”

Figure 36. How much immigration policies affected your ability to access reproductive health services?

Note: Percents may not add up to 100% due to rounding or missing answers
