

Hands-On Workshop: AI-Assisted Data Science with Positron

Positron

An AI-powered IDE for data science

Duration: 60 minutes

Join us for a 60-minute, guided workshop for R and Python users to explore how Positron can enhance your data science workflow. This hands-on session focuses on practical application. In a pre-configured Posit environment, you'll have the opportunity to work directly alongside Positron's thoughtfully implemented AI. There's no setup required, allowing you to focus entirely on learning.

In this workshop, you'll:

- Take a tour of Positron that shows why it is well suited to data science.
- Accelerate data exploration by guiding Databot to import, clean, and explore a new dataset, getting a head start on analysis
- Use Positron Assistant to help write new code, explain complex functions, and debug errors in both R and Python
- Use AI assistance to edit a Quarto document
- Learn how to publish a Quarto doc to Posit Connect with the Posit Publisher extension
- Learn Posit's data science-friendly philosophy for AI

Contact your account team to schedule a workshop for your organization.
